for a better world

Energy Upgrades – Kamloops, BC

Energy Scan – Vancouver, BC

Photovoltaics – Sunshine Coast, BC

Sustainability Workshop – Vancouver, BC

Lighting Design – Richmond, BC

Decarbonization Upgrade – Cranbrook, BC

Facility Condition Assessment – Vancouver, BC

Commissioning Authority – Vancouver, BC

Our services

Energy and Carbon Management

Reduce your emissions by eliminating waste and improving efficiency.

- Building controls
- Demand response
- Energy and carbon feasibility studies
- Energy and carbon upgrades
- Energy modelling
- Energy Star Portfolio Manager validation
- Performance monitoring
- Recommissioning
- Utility program evaluation

Strategic Energy Management

Embed a long-term culture of energy management across your organization.

- Coaching energy managers / leads
- Energy Management Information Systems
- Energy management training
- Energy planning
- ISO 50001
- SEM programs

Climate Action

Take action on emissions and prepare for climate change impacts.

- Climate change adaptation
- Deep carbon retrofits
- Decarbonization planning
- Photovoltaics (PV) / Solar power
- Renewable energy

Sustainability Services

Achieve your sustainability goals with impactful strategies, communications and programs.

- Communications strategy
- ESG strategy and reporting
- Fleet decarbonization planning
- Green building certification
- Water conservation
- Waste reduction planning
- Workplace engagement programs

Electrical Services

Renew your electrical systems to ensure reliability, safety, and efficiency.

- Data and communications
- Electrical distribution and emergency generators
- EV charging (fleet studies, EV ready reports, design and implementation)
- Fire alarm systems
- Lighting and lighting control systems design
- Metering and submetering
- Power quality studies

Mechanical Services

Renew mechanical systems to ensure reliability and comfort.

- Cooling plants
- Decarbonization
- District energy systems
- Heating plants
- HVAC
- Plumbing
- Ventilation and IAQ

Facility Services

Plan for your building's future.

- Cooling assessments
- Decarbonization capital plans
- Electrical planning reports (EPR)
- Facility condition assessments
- Space renovations

New Construction

Maximize your building's systems performance and ensure it begins its life on a sustainable path.

- Commissioning authority
- Energy modelling
- Green building certification
- Mechanical and electrical design

We help organizations achieve energy, climate, and asset renewal objectives by integrating engineering, energy management, and sustainability services.

Our culture

We care about people, clients, community, and planet.

We pursue excellence through continuous learning and a commitment to quality and innovation.

We have an entrepreneurial spirit. We are agile, collaborative, and forward thinking.

We operate in the following sectors

Commercial buildings, including retail & hospitality

Institutional & government facilities, including education & healthcare

Industrial & agricultural operation

Multi-unit residential buildings

Our history

Prism Engineering Limited opened our doors in 1990. From the very beginning of our journey, we focused on saving our clients energy, finding ways to improve efficiency in their buildings and operations, and changing the “energy use culture” within their organizations. Three decades later, with the growing urgency to address climate change, our work of helping organizations lead the way to a more sustainable future has never felt more relevant or important.
