

CHANGING **TECHNOLOGY** FOR
A BETTER WORLD

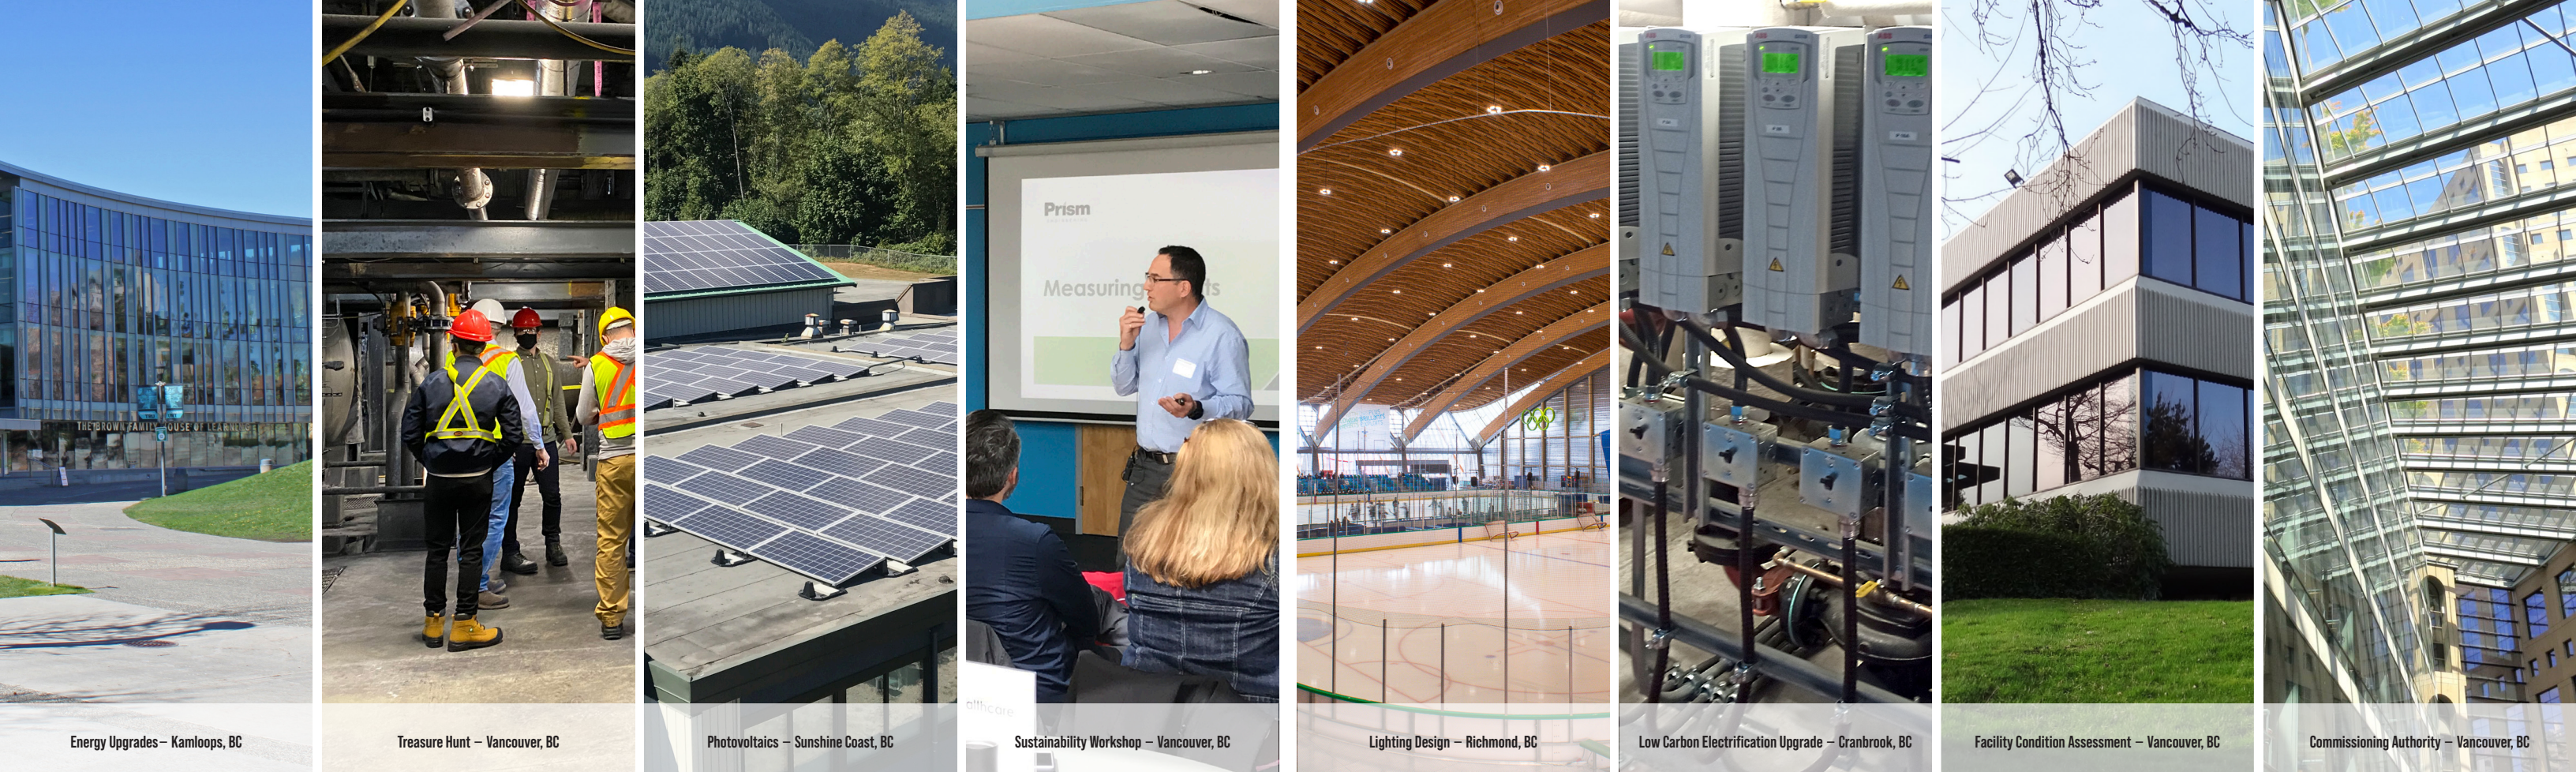

CHANGING **BUILDINGS** FOR
A BETTER WORLD

CHANGING **CULTURE** FOR
A BETTER WORLD

Changing systems
for a better world

Energy Upgrades – Kamloops, BC

Treasure Hunt – Vancouver, BC

Photovoltaics – Sunshine Coast, BC

Sustainability Workshop – Vancouver, BC

Lighting Design – Richmond, BC

Low Carbon Electrification Upgrade – Cranbrook, BC

Facility Condition Assessment – Vancouver, BC

Commissioning Authority – Vancouver, BC

Our services

Energy Management

Reduce your emissions by eliminating waste and improving efficiency.

- Energy audits
- Energy upgrades
- Building controls
- Recommissioning
- Performance tracking
- Energy modelling
- Utility program evaluation
- Energy Star Portfolio Manager validation
- Demand response
- District Energy Systems

Strategic Energy Management

Embedding a long-term energy management culture into your organization.

- Energy planning
- SEM programs
- Coaching energy managers
- ISO 50001
- Energy management training
- Energy Management Information Systems (EMIS)

Climate Action

Take action on emissions and prepare for climate change impacts.

- Carbon reduction and GHG planning
- Climate change adaptation
- Deep carbon retrofits
- Renewable energy
- Photovoltaics/ solar power

Sustainability Services

Achieve your sustainability goals with impactful strategy, communications and programs.

- Sustainability strategy
- Workplace sustainability engagement
- Green building certification
- Water conservation

Electrical Services

Renew your electrical systems to ensure reliability, safety, and efficiency.

- Electrical distribution and emergency generators
- Lighting and lighting control systems design
- EV charging
- Power quality studies (power quality and harmonics)
- Fire alarm system

Mechanical Services

Renew mechanical systems to ensure reliability and comfort.

- Cooling plants
- Heating plants
- HVAC
- Ventilation and IAQ
- Plumbing
- Low carbon electrification
- District energy

Facility Services

Plan for your building's future.

- Space renovations
- Facility condition assessments

New Construction

New building design, engineering and construction administration.

- Mechanical and electrical design
- Commissioning authority
- Green building certification
- Energy modelling

We help organizations achieve energy, climate, and asset renewal objectives by integrating engineering, energy management and sustainability services.

We care about people, clients, community and planet.

We pursue excellence through continuous learning and a commitment to quality and innovation.

We have an entrepreneurial spirit.
We are agile, collaborative and forward thinking.

We operate in the following sectors

Commercial buildings,
including retail
& hospitality

Institutional &
government facilities,
including education
& healthcare

Industrial &
agricultural operation

Multi-unit
residential buildings

Our History

Prism Engineering Limited opened our doors in 1990. From the very beginning of our journey, we focused on saving our clients energy, finding ways to improve efficiency in their buildings and operations, and changing the “energy use culture” within their organizations. Three decades later, with the growing urgency to address climate change, our work of helping organizations lead the way to a more sustainable future has never been more relevant or important.
